POWDER COATING, GALVANISING

Powder Coating and galvanising will enhance the durability, aesthetics, and longevity of your light poles. We can apply a durable and vibrant finish that protects against corrosion, fading, and weathering. With a wide range of colors and finishes to choose from, we ensure your light poles make a lasting impression.

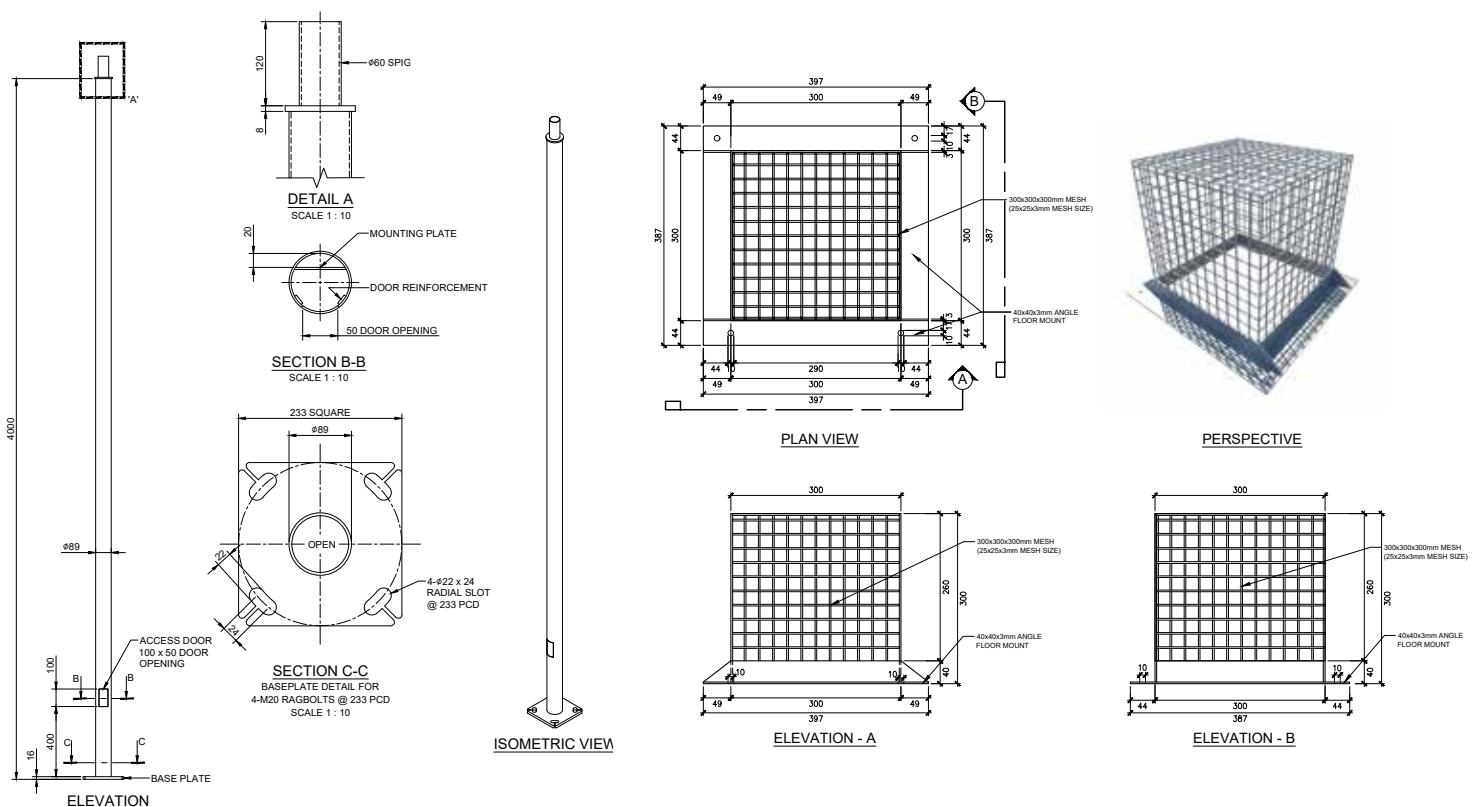

FABRICATION, ENGINEERING

We have extensive experience in various fields of engineering, including welding, design, and custom lighting solutions.

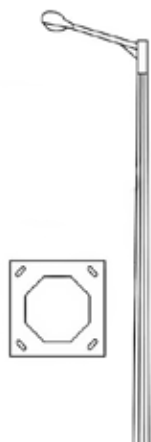

Our lighting design team can assist with car park lighting design, and we offer a complete package that covers all necessary equipment, from lights and poles to cross arms and reo cages.

We also handle the commissioning of lights, ensuring proper aiming angles and lux levels after installation.

TAPERED OCTAGONAL POLES

Due to their high strength-to-weight ratio, Tapered Octagonal Poles are the most commonly used poles and are also the most cost-effective to manufacture. Stocked from 4.5m up to 18m, including textura black powder coated.

TAPERED ROUND POLES

Tapered Round Poles have a contemporary and architectural look, while having the capacity required for many lighting designs. They are used from 4.0m to 8.0m, and have a sleek appearance when powder coated.

SQUARE SECTION POLES

With a modern and polished appearance, Square Poles are a professional and sleek option, often used in car parks and urban areas, and are designed to complement square streetlights. We stock poles from 3m to 8m.

ROUND PIPE POLES

Round Pipe Poles are minimal and straightforward, making them ideal for lighting installations from 2.0m up to 6.0m. They can be powder coated for a high quality finish.

UTILITY POLES

Service Poles are used to support various overhead utilities into buildings, most commonly power and NBN.

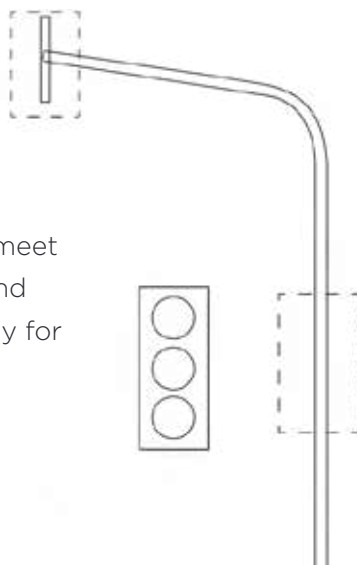

STREETLIGHT POLES

Structurally designed to provide maximum light and support light fixtures, this type of pole is commonly used for residential street lighting. Base Plate Mount, and Direct Buried options available.

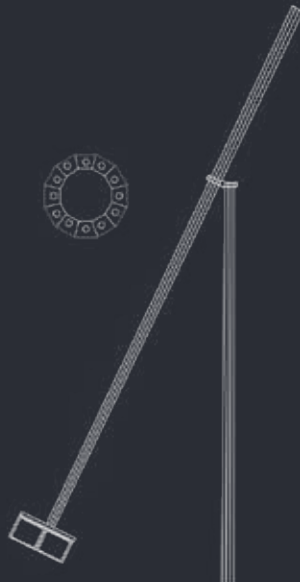

TRAFFIC SIGNAL POLES

Traffic Signal Poles are designed to meet council specifications for roadway and intersection requirements, specifically for signal and lighting applications.

MID-HINGE POLES

Designed for effortless maintenance, Mid-Hinge Poles are useful for wind socks, solar panels, CCTV and other areas hard to access by lift equipment.

CAMERA POLES

Created for Intelligent Transportation Systems, such as traffic surveillance cameras and security monitoring, our Camera Poles are designed to be aesthetically pleasing and functional.

A rigid pole design with minimal deflection. Suitable from 2.5m up to 10m.

DECORATIVE POLES

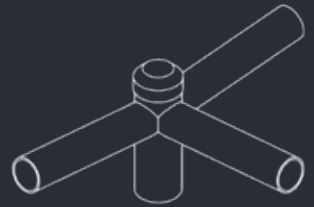

Decorative Light Poles are custom made, providing a unique solution in both modern and heritage styles. They include fluted and flange designs, with options up to 8m in height.

POLE ARMS & BRACKETS

Single, Double and Triple Outreach Arms, Cross Arms, Streetlight and Floodlight Brackets.

REO CAGES

Reinforced with highstrength mild steel, our cages are designed and engineered to fit and support our quality light poles. They are guaranteed to withstand considerable tension in Wind Region A, making them the ideal support for our firstclass lighting options.

FREIGHT

With our in-house transportation capabilities, we can efficiently deliver poles up to 8m in length within Tasmania. For larger deliveries, we collaborate with trusted trucking companies to ensure safe and timely transportation. We offer the convenience of quoting freight costs directly to your site, simplifying the process and saving you time. Count on Horizon Poles for hassle-free and efficient freight services tailored to meet your light pole delivery needs.

QUALITY SERVICE GUARANTEE

HORIZON POLES offers high-quality products and outstanding customer service throughout the entirety of the project. All of our products are certified to ensure compliance with Australian Standards.
